# Active/Active Infrastructure

The state of Active/Active is where quote and audit calls flow seamlessly through both our primary and secondary data centers – this includes automated checks that monitor and analyze the health of each data center and directs traffic appropriately. Active/Active doubles the capacity for transactions to support your business surges and empowers your business to operate 24/7, 365 days a year. Sovos won't settle for anything but the best, and achieving a state of Active/Active provides you an additional layer of protection to keep your critical business operations running.
